Dear industry colleagues:

Welcome to IAGI's third biennial Membership Directory. The companies presented here make up the backbone of the geosynthetics industry. They bring with them a wealth of experience in many facets of this industry. Since its formation in 1996, IAGI has sought to improve the field through various measures, such as welder certification.

The IAGI Certified Polyethylene Welders exam is available to welders who have a minimum of 500,000 square feet (46,000 square meters) of on-the-job experience. Welding technicians must take a two-part exam consisting of a written examination and a hands-on welding demonstration. The hands-on portion of the exam is tested by a third-party laboratory for peel and shear strengths. Technicians must pass both the written and the hands-on portions. Both wedge welding and extrusion welding certifications are available. The exam is available in three languages: English, French and Spanish. Bill Steinke, IAGI's intrepid international liaison, is working to translate the tests into other languages. This Membership Directory notes those companies that have certified welders on staff. Look for the CWT logo (pictured above).

Despite our progress in this area, we cannot rest on our laurels. John K. "Robbie" Robinson and his team are developing the certification process for the Reinforced Materials group. Robbie expects to finalize this work soon. Furthermore, IAGI has undertaken the task of changing polyethylene destructive testing field requirements. The goal is to reduce/eliminate the amount of destructive testing done and replace that testing with other methods for verifying the integrity of a liner. The IAGI newsletter will keep you updated on the progress of this project. Contact iagi@iagi.org to be added to the e-mail update list.

I cannot conclude this editorial without thanking the Industrial Fabrics Association International and our advertisers for helping IAGI develop the 2003 directory. I owe a special "thank you" to Mary Hennessy, Publisher at IFAI, for spearheading this effort. Our goals and objectives are the same—improve the geosynthetic industry for all of its stakeholders.

IAGI is always looking for volunteers to head up projects. Without the army of volunteers we have working for IAGI, our work couldn't get done. I owe my personal thanks to each of these individuals for their efforts.

Sincerely,

Robert Haddox
President, International Association of Geosynthetic Installers

IAGI Mission Statement

IAGI strives to provide a forum for geosynthetic installers to advance installation and construction techniques, and to strengthen the knowledge, image and communication within the industry.

Experience and training have little value if the people involved don't have the desire to help you succeed. With Poly-Flex Construction, Inc., your project needs become our product improvements; your schedules become our planning meetings; and your success becomes our objective.

The Poly-Flex Construction team has the ability, experience and desire to provide a high level of service—from project start to finish. This approach has allowed us to successfully install millions of square feet of polyethylene liners in a wide range of environmental and containment applications.

And we plan to install millions more.

No one demands more of us than we do of ourselves. That keeps us on the Cutting Edge of Service.
