**Huge market potential**

As the most dynamic economic center in China and the host of World Expo 2010, Shanghai has shown its beautifulness as a modernized city with fast and sustainable economic and social development, offering numerous business opportunities to domestic and foreign enterprises.

In recent years, city appearance and environmental sanitation in Shanghai has embarked on a new period of development. A comprehensive system for collection, transportation, treatment and reclamation of municipal solid waste has come into being; the reduction, reclamation and hazard-free treatment of domestic waste is in stable enhancement; and the investment, construction, operation and management of projects are striding towards marketization, diversification and internationalization, with several advanced establishments set up in the metropolis. For instance, two domestic waste incineration plants have been constructed with a daily waste treatment capacity of 2,500 tons, which has succeeded in generating electricity through incineration so as to recover the energy out of wastes. A comprehensive treatment plant, combining automatic separation and biochemical techniques, has been established with a daily waste disposal capacity of 1,000 tons. Three domestic waste transfer stations have been built with a daily transfer capacity of 1,500 tons. Furthermore, a number of regional treatment plants of kitchen wastes have gone into operation. A great number of modern facilities have been developed. For example, the exploitation and application of rendezvous technology between the large and small suction-type excrement tankers have boosted excrement transfer capability in high-density areas in the city. The successful development of high-pressure road washer has effectively reduced dust fall and improved road cleanliness. The development of small collectors with storage batteries has eliminated noise and leakage generated by waste collectors upon their entrance into living quarters. The development and application of automatic weighing system for domestic waste has not only terminated the period of rough estimation of the load of waste trucks and ships and entered upon the period of actual weighing and computation, but also realized real-time transfer of data from weighing sites, which facilitated monitor, control, toll calculation and account settlement of waste weighing system.

The construction of city cleaning system has been improved continuously. The quaternary cleaning system consisting of city's plain, facade, dimensional and moving surfaces has been established with the cleaning of roads, water areas, buildings, public toilets, greenbelts, vehicles, residential quarters and public establishments. Undertaking waste collection and transportation as well as road sweeping and cleaning, over 4000 sanitation vehicles, including waste trucks, suction-type excrement tankers, sweeper trucks and cleaning tankers, are shuttling through the city presently.

**Action Plan for Solid Waste Treatment**

Centering upon the construction of “four centers” and the successful hosting of the World Expo 2010, the city of Shanghai is marching towards the building of an international metropolis based on resource-saving and eco-friendliness. The existing systems and facilities will be upgraded or rebuilt on a large scale in application with advanced technologies and products with a total investment of 4 billion RMB. In order to realize the development blueprint of Shanghai and to achieve the objectives of leading the nation in city appearance and sanitation environment and keeping abreast with the advanced countries in the world, Shanghai welcomes enterprises from both at home and abroad with high sincerity and zealousness for their participation in environmental construction. The wide scope of cooperation, including not only products, technology and capitals, but also management, experience and people of talents.
Sponsor- Shanghai City Appearance & Environmental Sanitation Bureau

Shanghai City Appearance & Environmental Sanitation Bureau is an administrative institution that administers Shanghai’s overall industry and full process of city appearance & environmental sanitation. Its main responsibilities are: to organize and implement the plan of city appearance & environmental sanitation; to administer, supervise and check the city appearance & environmental sanitation work; to be responsible for the administration of urban domestic waste, special pollutants, vehicle cleaning, necessary accessories of environmental sanitation and wastewater; to organize and coordinate the city appearance & environmental arrangement during the important activities; to coordinate the integrated problem of city appearance & environmental administration and construction; to develop important scientific research in the environmental sanitation system; to improve technological progress and result transformation; to enhance the exchange and cooperation on city appearance & environmental sanitation work with organizations from both home and aboard.

Where will the show be held?

SWET 2006 will be held at the Shanghai Exhibition Center in downtown Shanghai, China. Shanghai Exhibition Center (SEC) has a total floor space of 80,000 square meters, of which 22,000 square meters are open for exhibition purposes. After significant renovations in 2001, the facility has up-to-date electric, electronic, networking and ventilation systems. On the premises are dozens of conference rooms, restaurants, and coffee shops. Outside has ample parking, but exhibitors might find the short walk to many of Shanghai’s star-rated hotels even more convenient.
What should be displayed?

The products, technology and services in the following categories are encouraged to be displayed at SWET 2006:

- facilities and technologies on sorted solid waste collection
- vehicles and technologies on the collection and transportation of solid waste
- facilities and technologies on reclamation and comprehensive utilization of solid waste
- facilities and technologies on landfill, incineration and biochemical treatment of solid waste
- treatment facilities and technologies on the treatment of odor and liquid engendered during the collection and treatment of solid waste
- containers and technologies on the collection and storage of solid waste
- facilities and technologies on treatment and recycling of waste water and sewage
- public toilets and mobile lavatories in the city and relevant technologies
- cleaning of roads and vehicle sand relevant technologies
- facilities and technologies on square clearing and cleaning
- facilities, material and technologies of cleaning and maintenance of external walls of buildings
- ship and technologies on water area cleaning and supervision
- facilities and technologies on city appearance supervision
- facilities and technologies on various cleaning
- various sanitation, cleaning and disinfection products
- relevant design, consultation, media, periodicals and magazines

Who will visit?

People from the following organizations, departments and companies will visit SWET 2006:

- Officials from the city appearance & environmental sanitation bureaux from Shanghai and neighboring provinces and cities
- Local communities
- Property management companies
- Public service utilities, including airports, harbors, transportation stations, restaurants and gardens
- Environmental monitoring and research institutes
- Universities and colleges
- Environmental project design, supervision and construction companies
- Hospitals (medical waste treatment departments)
- Others involved in waste disposal
How much will you pay?

Special offer on booth fee for early-bird applicants till May 31, 2006!
